

Case Study

INEX>RENDERBOARD Clads High Rise Apartments

PROJECT: **Apartment Tower
Rickard Road,
Bankstown NSW**

WHEN: **April 2017**

PRODUCT: **INEX>RENDERBOARD**

ARCHITECT: **Marchese Partners**

This 10 storey high rise apartment building at Bankstown NSW (nearing completion) has been completely clad in **INEX>RENDERBOARD** providing a functional and highly attractive finish. The project was originally specified in AAC Panels but was redesigned to be built with **INEX>RENDERBOARD**, reducing the cladding thickness from 75mm to 16mm thick. Approximately 8,000m² of **INEX>RENDERBOARD** was installed for the project, smooth side with a paint finish. **INEX>RENDERBOARD** is a lightweight cladding system and was selected for the project as it meets the necessary fire rating required, it has passed the CSRIO weather test and provides acoustic performance at least equal to the AAC facade. The results have been so succesful that developer has placed orders for its next six high rise buildings.
